Designed for the Harsh Conditions of Combat

Safe & Agile

The tail wheel allows for greater safety in the event of high flare landings and greater maneuverability on the ground.

Energy Attenuating, 3-Wheeled Landing Gear

Energy attenuating, non-tricycle, wheeled landing gear designed for unprepared landing zones and sloped areas:

- Absorbs energy in the event of a mishap/hard landing thereby protecting occupants from high loads.
- Landing Gear withstands sink rate of 30 fps with airframe 38 fps making it more than 5x safer than commercial aircraft..
- Allows for taking off and landing in significantly higher sloped terrain and/or unprepared surfaces.

Evasive & Maneuverable

Ballistically Tolerant with a High Vertical Rate of Climb (VRoC) and Angle of Bank

- 3rd Generation Composite Wide Chord Main Rotor Blades provide improved tactical performance.

Air Lift Transportable
