STATE CERTIFICATIONS

In some instances it may be necessary for environmental data to be reported to a regulatory authority with reference to a certified laboratory. For your convenience, the laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

Case Narrative

Sample Receipt – All samples were received in good condition and at the proper temperature.

Volatile Organics – Volatile organics were determined by purge and trap GC/MS using guidance provided in Method 5030B/8260B. The instrumentation used was a Tekmar Model 2000/2016 Concentrator interfaced with a Hewlett Packard Model 5970A GC/MS/DS.

The spike compound percent recoveries for benzene were within the laboratory generated guidelines in the independent source quality control samples (020PPB_QCS).

The percent RPD value for vinyl acetate was above the criteria limit of twenty percent.

Metals – ICAP metals were determined using a JA61E trace ICAP; mercury was determined by cold vapor technique using a Leeman Labs mercury analyzer; following guidance provided in SW846 according to methods: ICAP – 3050B/6010B; mercury-7471A.

One “*” flag resulted from duplicate analysis of sample 21G (21.5) for chromium.

No other problems occurred during analysis. All appropriate protocols were employed. All data appears to be consistent.

Semi-Volatile Organics - Semi-volatile organic samples were extracted and analyzed by capillary GC/MS according to NYSDEC '95 Protocols using guidance provided in Methods 3510C/3550B/8270C. The instrumentation used was a Hewlett-Packard Gas Chromatograph interfaced with a Mass Selective Detector.

The spike recovery for the compound, benzoic acid, was above recovery limits and benzyl alcohol was below recovery limits for SBLKISFMS.

The spike recoveries for phenol and 2,4-dinitrotoluene were above recovery limits for 21G(21.5)MS. The recovery limits for 4-chloro-3-methylphenol, pentachlorophenol, and 2,4-dinitrotoluene were above recovery limits for 21G(21.5)MSB.

Polychlorinated Biphenyls (PCB's) - PCB samples were extracted and analyzed by GC/ECD using guidance provided in Methods 3510C/3550B/8082. The instrumentation used was a Hewlett-Packard Gas Chromatograph equipped with an Electron Capture Detector (Ni63).

All samples were extracted and concentrated without any apparent problems.

The aroclor's detected in 21G (26.5) and REP-1 were below the reporting limit and were not confirmed.

Surrogate recovery for Tetrachloro-m-xylene was above QC limits in PBLK19, PBLK19QC2, and FB071201. It was suspected that a contaminant peak coeluting with Tetrachloro-m-xylene elevated the recovery.

Manual integrations were performed if required, and any affected peaks were designated with an "MM" on the area report in the column titled "Code". Manual integrations were initialed by the analyst that performed the integration.

ORGANICS APPENDIX

- U – Indicates that the compound was analyzed for but not detected.
- J – Indicates that the compound was analyzed for and determined to be present in the sample. The mass spectrum of the compound meets the identification criteria of the method. The concentration listed is an estimated value, which is less than the specified minimum detection limit but is greater than zero.
- B – This flag is used when the analyte is found in the blanks as well as the sample. It indicates possible sample contamination and warns the data user to use caution when applying the results of this analyte.
- N – Indicates that the compound was analyzed for but not requested as an analyte. Value will not be listed on tabular result sheet.
- S – Estimated due to surrogate outliers.
- X – Matrix spike compound.
- (1) - Cannot be separated
- (2) – Decomposes to azobenzene. Measured and calibrated as azobenzene.
- A – This flag indicates that a TIC is a suspected aldol condensation product.
- E – Indicates that it exceeds calibration curve range.
- D – This flag identifies all compounds identified in an analysis at a secondary dilution factor.
- C – Confirmed by GC/MS.
- T – Compound present in TCLP blank.
- P – This flag is used for a pesticide/aroclor target analyte when there is a greater than 25 percent difference for detected concentrations between the two GC columns (see Form X).

STATE CERTIFICATIONS

In some instances it may be necessary for environmental data to be reported to a regulatory authority with reference to a certified laboratory. For your convenience, the laboratory identification numbers for the STL-Connecticut laboratory are provided in the following table. Many states certify laboratories for specific parameters or tests within a category (i.e. method 325.2 for wastewater). The information in the following table indicates the lab is certified in a general category of testing such as drinking water or wastewater analysis. The laboratory should be contacted directly if parameter-specific certification information is required.

STATE OF NEW YORK DEPARTMENT OF HEALTH

Antonia C. Novello, M.D., M.P.H., Dr.P.H.

Dennis P. Whalen
Executive Deputy Commissioner

February 7, 2001

Dear Laboratory Director,

The effective date, nationwide, for granting accreditation under the National Environmental Laboratory Accreditation Program (NELAP) was January 24, 2001. I congratulate you that, effective January 24, 2001, your laboratory is NELAP-accredited, having demonstrated compliance with the National Environmental Laboratory Accreditation Conference (NELAC) standards. New York is your NELAP Primary Accrediting Authority (PAA), either because your laboratory is located in New York, or because your laboratory is in a non-NELAP state and you selected New York as your PAA.

Enclosed are revised certificates of accreditation. They are as follows:

NELAP certificates. These certificates bear the NELAP logo in the bottom right-hand corner, and you have received one certificate for each category of accreditation. These certificates list those fields of testing (EPA Program - Method - Analyte) that are within the scope of NELAC and for which your laboratory has satisfied the NELAC requirements.

ELAP certificates. These certificates do not bear the NELAP logo. They list any remaining fields of testing for which you are accredited in New York, but do not have NELAP accreditation. Those remaining fields of testing are either outside the scope of NELAC, or are within the scope of NELAC but your laboratory has not yet satisfied the NELAC PT requirements or has not provided us with method citations.

Please note that either certificate may also reflect recent accreditation changes based on your PT performance. Your old certificates must now be returned to this office.

Your NELAP certificates will be amended and re-issued any time additional fields of testing are added to your accreditation (e.g., if your laboratory meets the NELAC PT requirements for additional analytes, or provides us with any missing method citations).

The designation "NELAP-accredited" demonstrates that your laboratory is recognized nationally to have met the highest standard of quality. Your laboratory is now permitted, and encouraged, to use the enclosed NELAC logo. The NELAC Standard (Section 6.8) strictly defines and limits the use of "NELAP accreditation" and the NELAC logo. If you would like to receive electronically a high-resolution image of the logo ("tif" format), please e-mail the program office at elap@health.state.ny.us

Please do not hesitate to contact the program office at (518) 485-5570 if you have any questions about your certificates or your NELAP accreditation.

Yours sincerely,

Kenneth W. Jackson, Ph.D.

Christina:

Here is the profile for the water and sediment remaining in the baker tanks that we are going to bring to S&W. Please have this signed and return it to me as soon as possible.

Thanks,
Kate

Carlo, please sign the attached profiles "on behalf of LMC".
This profile is for the sediment in the bottom of the Baker tanks. ITS is using a combination of analytical results from the liquid in the Baker tank and the solids from general decon to profile the waste.
